

## Mother Tongue to Mandarin: Why Multilingual Learning in Early School Years Gives Children a Lifelong Edge

Learning a new language is like opening a door to a new world. Many parents think about when their child should start this journey, often seeking out the **best preschool in gurugram** to give them an early advantage. Early childhood is the best time for the brain to soak up new sounds and words. Moving from a mother tongue to a language like Mandarin helps a child grow in many ways. This process builds better thinkers and more empathetic humans. It is a gift that stays with a child forever.

### The Science of the Young Brain

Young children have brains that are like sponges. They can pick up accents and grammar rules naturally. This is because the brain is very flexible during the first few years of life. Research shows that children who learn two languages have more gray matter in their brains. This part of the brain handles information processing.

- Early learners use the same part of the brain to learn all languages.
- Adults must use different parts of the brain to learn a second language.
- This makes early learning much more efficient and lasting.
- Studies from Harvard University show that learning a second language increases creativity.
- It also improves a child's ability to solve complex problems easily.

## **Why Choose an International Curriculum?**

Choosing the right school is the first step in this journey. Many parents look for the best international school in Gurugram to find a global environment. These schools offer a mix of local values and global skills. They provide a safe space where children can hear different languages every day.
